

citrus

- Improves rooting of nursery trees
- Better fruit set of bearing trees
- Improves new root development in spring
- Better fruit mass
- Quicker recovery of trees after harvest
- Better yields

Kelpak is a natural biostimulant manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Kelpak is produced using a cold cellular burst extraction method to preserve the delicate compounds in the cell sap. The end product significantly improves overall plant growth and increases citrus yield.

A global leader in seaweed products for over forty years

RECOMMENDED APPLICATION RATE

Established trees: 0.2% (200 ml /100 L water) foliar spray applied 3 times between white tip to full bloom. Optional 4th application at fruit set

Post harvest spray: 0.2% (200 ml /100 L water) with nitrogen application and repeated 14 days later for recovery of heavy fruit bearing

Tree establishment: Apply 1 L of a 1.0% Kelpak solution (1 L Kelpak in 100 L water) as a soil drench directly after plant or drench the nursery bag with the solution directly before plant-out

For better tree development apply foliar sprays of 200 ml Kelpak per 100 L water (0.2%) with 3 to 4 week intervals during early growth

Kelpak is manufactured using the unique cold Cellburst extraction process
